My name is Ryan Roberts and I've been a commercial fisherman in Rhode Island my entire working life. Putting windmills in our vital squid grounds off of Nantucket would break the back of the local fishery. Without squid in the summer the existing boats would be headed for financial ruin. I worked my way up since 1998 when I started and have finally purchased my own boat in 2015. I have a family that depends on this income to live, the loss of squid grounds in the summer would be devastating. Not sure how we make Calamari the state appetizer one year and then give our historic fishing area away to foreign wind companies the next year. Please reconsider this, it's a terrible mistake and when the windmills expire these companies fully intend to drill for gas and oil with these platforms. Thank you for your consideration.

Sincerely,
Captain Ryan Roberts

Subject: [EXTERNAL] : RI Offshore Wind Energy Project

I have some public comments for you. Green = Death. Materials from China. Which strips the earth with no regulation. Huge maintenance costs. Severe impact to the fishing industry. Destroy the landscape. And these pieces of junk do not generate enough power to justify their existence. What a joke

Subject: [EXTERNAL] : OffShore Wind Farm Commenting Period

Good Afternoon,

I fully SUPPORT the offshore wind farm project. Not only is this needed to reduce our dependence on fossil fuels, but also to help reduce emissions and look to a better tomorrow.

I am also excited as to what these structures will do for our fisheries. These structures provide a habitat for diverse marine life growth and safe harbor for these animals to re-populate our over fished habitats.

One only has to look at the myriad of decommissioned structures in the Gulf coast to see this in action!

Thank you,

Joshua Ouvry
