Dear Mr. Bianco,

I urge you to reject the fracked gas power plant proposed for Burrillville. Simply put, this power plant would take Rhode Island in the wrong direction.

There are serious concerns about local air and water pollution wherever a fracked gas power plant is built and operates, resulting in environmental and health concerns. If built, this plant would use thousands of gallons of Rhode Island's water and generate huge amounts of wastewater every single day. And it would promote fracking and accelerate climate change. Moreover, energy analysis and grid operators have proven that there isn't even a demand in the region for this power plant.

Burrillville residents deserve better than this fracked gas Invenergy plant. Rhode Island's future deserves better, too.

Protect our climate, our water, and the next generation of Rhode Islanders by rejecting Inenergy's Burrillville Power Plant proposal.

Sincerely,

Deanna Pickering

Hello, I'm writing as a concerned citizen and resident of Burrillville, RI. I've been closely following the power plant developments and am firmly against the progress moving forward because I care deeply for the safety, health and well-being of Rhode Islanders.

We do not want this power plant and it's fossil fuels in beautiful Burrillville. This doesn't benefit Rhode Islanders enough to justify taking resources away from residents and possibly subjecting us to negative consequences which, unfortunately are very real possibilities that other communities with power plants are facing.

After hearing the recent Invenergy issues happening in Pennsylvania regarding pollution and lack of information going to citizens there, I would never want this to happen in Rhode Island and am voicing my opposition to any further progress.

Thank you for your time and attention to this crucial issue.

Sincerely,

Bethany Karbowski
