Subject: [EXTERNAL] : No Invenergy Power Plant

Follow Up Flag: Follow up
Flag Status: Flagged

Invenergy's electricity is neither needed nor wanted for keeping the New England electricity grid reliable. This fracked-gas plant would clear-cut 200 acres of RI forest and add 3 tons of hazardous pollutants to the RI air per year. Both Charlestown and Burrillville contain critical wildlife habitats and recreation areas and are important in their own right, but in a regional context they are even more important. Fragmentation at either end of this corridor diminishes the importance of the entire corridor for both wildlife and recreation. The consumption of one of our most valuable resources (water) also makes this a bad decision.

Please oppose all Invenergy acts of aggression against our beautiful state.

Thank you.

Margot Willis-Doyle
