VIA HAND DELIVERY AND ELECTRONIC MAIL

Luly E. Massaro, Commission Clerk
Rhode Island Public Utilities Commission
89 Jefferson Boulevard
Warwick, RI 02888

**RE: Annual Environmental Report for Gas Service
Period of April 1, 2013 – March 31, 2014**

Dear Ms. Massaro:

Enclosed are ten (10) copies of National Grid's¹ annual Environmental Report for Gas Service ("Report") for the period April 1, 2013 through March 31, 2014, related to natural gas service in Rhode Island. This Report contains a description of the environmental remediation sites as well as the expenses incurred during the reporting period.

In accordance with the settlement of the 2012 Distribution Adjustment Charge ("DAC") proceeding in Docket No. 4339 and the Rhode Island Public Utilities Commission's Order No. 21005 (April 8, 2013) in that proceeding, the Company must include in its annual Environmental Report for Gas Service all asset sales or exchanges involving real property that the Company has acquired or may acquire that is funded by its customers through the DAC. In addition, any such future profits from the sale of land for which acquisition costs have been included in the Environmental Response Cost Factor in the DAC must be credited to customers. For the reporting period, there were no such sales of real property.

Thank you for your attention to this filing. If you have any questions, please contact me at (781) 907-2153.

Very truly yours,

Celia B. O'Brien

Enclosures

ENVIRONMENTAL REPORT

For Period
April 1, 2013 – March 31, 2014

A. 642 Allens Avenue, Providence, Rhode Island

This site is the former Sassafras Point Manufactured Gas Plant (“MGP”), which operated from 1910 until 1953. The site abuts the Providence River in a heavily industrialized area and is currently the location of The Narragansett Electric Company’s (the “Company”) central gas supply facility. The Phase 1 remediation project (addressing 4.5 acres) was completed in October 2002 and a Closure Report was filed with the Rhode Island Department of Environmental Management (“RIDEM”) in December 2002. A Site Investigation Report (“SIR”) addressing the remaining 37.5 acres of the site was submitted to RIDEM in April 2003. The Company met with RIDEM in November 2013 to discuss proposed additional investigation activities. Once this work is complete, the Company anticipates submitting a Supplemental SIR. Until National Grid receives a closure letter from RIDEM for Phase 1 remedial activities and completes additional investigation activities, it is unclear what, if any, additional investigation or remediation will be necessary. The Company continues to perform semi-annual groundwater/non-aqueous phase liquid (“NAPL”) gauging, groundwater sampling and reporting to RIDEM, as well as maintenance of a boom in the Providence River. In addition, costs reported during this period include those associated with environmental support and planning for several facility related projects and environmental field support and oversight for planned and emergency utility repairs, including an emergency repair and expedited upgrade to 900 feet of 16-inch water line.

B. 170 Allens Avenue, Providence, Rhode Island

Citizens Gas Light began manufactured gas plant operations at this site circa 1875. After Providence Gas acquired the plant in 1877, it was known as the South Station Plant. This former MGP operated until 1916. Subsequent to its use as a gas plant, this site was operated for over eighty years as a bulk fuel oil storage yard by a succession of companies including Cargill, Inc. (“Cargill”). In November 1998, Providence Gas received a letter of responsibility from RIDEM relating to possible contamination. Cargill has also received a letter of responsibility from RIDEM for the site. An investigation was initiated to determine the extent of contamination, as well as the extent of the Company’s responsibility. In September 2009, Cargill Petroleum, Rhode Island State Piers, LLC (“RISPP”) and the Company received a Letter of Non-Compliance (“LNC”) from RIDEM requiring that the Parties complete certain activities at the site. Costs incurred during this period were higher than in previous years due to the Company’s implementation of the RIDEM-approved upland remedy for the site which included the installation of a containment wall, excavation and off-site thermal treatment of certain impacted soils and construction of an engineered cap (including installation of integrated storm water treatment systems). Activities performed this year were primarily associated with the permitting, final design, procurement, implementation and oversight of the work. Costs incurred during the period also include the following activities: legal related matters associated with obtaining access to adjacent properties and an easement from the City of Providence to enable the Company to perform the upland remedy; City of Providence fees for the easement to perform the remedy; RIDEM oversight charges; and submittal of monthly progress reports to RIDEM. A credit for rental fees for the dock use in 2012 was included in this year’s costs (included in Category 5 Other Costs) and a reimbursement from Cargill of \$227,043.04 for costs incurred in 2012 (included in Category 4 Property Purchases/Settlements/Legal). In addition, the Company received an additional \$1,482,810 in reimbursement from Cargill for the site activities through January 31, 2014 (recorded in April 2014 and will be reflected as a credit in next year’s environmental report).

Valley Resources Sites in Rhode Island

The Company's contribution action against Southern Union Company (“SU”) relating to the remediation of the Mendon Road site in Attleboro, Massachusetts was dismissed following the sale of SU's Rhode Island gas assets to the Company in August 2006. The suit, which alleged that SU shared liability for the Mendon Road site, which was allegedly contaminated with coal gas manufacturing waste transported from a former MGP in Pawtucket, Rhode Island, was dismissed by the Company because the Purchase and Sale Agreement between the Company and SU allocated to the Company the environmental liability for the Mendon Road site, the Tidewater MGP site in Pawtucket and the Hamlet Avenue MGP site in Woonsocket.

As a further result of the allocation of environmental liability in the Purchase and Sale Agreement, the proceeds from the bankruptcy claim by the Company and SU against the Stone and Webster entities of approximately \$6.129 million, which had been held in an escrow account pending the resolution of the contribution dispute between the Company and SU, were liquidated to the Company in January 2007 and have been applied to the Rhode Island gas and electric environmental response funds.

C. Mendon Road, MA

This project is associated with the Mendon Road remediation following discovery of manufactured gas plant wastes at this location. No further work is anticipated on this project.

D. Pawtucket (Tidewater) MGP, Rhode Island

This project is associated with the site investigation and remediation activities at the former MGP and power plant site at this location. Following the Purchase and Sale Agreement between the Company and SU, 80 percent of the costs associated with the site are assumed by electric operations of the Company, with the remaining 20 percent assumed by the gas operations of the Company.

The 28-acre site was the location of a former MGP which operated from the 1880s until 1954. In addition the property housed a power plant that operated from the 1890s until 1976. The site currently houses gas and electrical operations, including a gas regulator station, an electrical substation and two transmission towers. Site investigation activities have been performed at the site since 1986. Costs incurred during this reporting period are associated with finalization and submittal of a Public Involvement Plan for the site; maintenance of a website to allow for public access to certain site information; regular updating of two bulletin boards near the site; implementation of the RIDEM-required soil gas sampling program, including preparation of a work plan, public notifications and preparation for the associated public meeting; planning for a limited soil and groundwater investigation in the gas regulator area of the site, including submittal of a work plan to RIDEM and planning for the April 2014 work; annual groundwater monitoring and NAPL gauging and preparation of a report to document past sampling; monthly monitoring well gauging; weekly site inspections; and preparation of weekly/bi-weekly and monthly status reports for submittal to RIDEM.

E. Woonsocket (Hamlet Ave.) MGP, Rhode Island

This project is associated with the site investigation and remediation activities at the former manufactured gas plant site at this location. Following the Purchase and Sale Agreement between the Company and SU, 80 percent of the costs associated with the former MGP site are assumed by electric operations, with the remaining 20 percent assumed by the gas operations of the Company.

The site was the location of a MGP which operated from 1852 until approximately 1913. The site currently houses a gas regulator station. Site investigation activities were performed at the site in the late 1990s and a draft Site Investigation Report was prepared. Site visits were performed during this reporting period.

F. PCB Regulated Pipe Abandonment, Rhode Island

In 1998, EPA enacted a major change to regulations 40 CFR Parts 750 and 761 governing polychlorinated biphenyls (“PCBs”). These new regulations are commonly referred to as the “MegaRule.” Among other matters, the MegaRule addresses the testing, characterization, and disposal of PCB-contaminated pipe in natural gas distribution systems. This project tracks costs associated with the analytical testing of condensate and wipe test samples and disposal of PCB-contaminated condensate, drip water, and pipe. Project costs this past period were higher than those incurred in the prior fiscal/reporting years due to the accelerated replacement of gas services and mains to improve system reliability. Costs for this program were \$113K and \$122K for fiscal years 2011 and 2012, respectively. Costs for reporting year 2013 (9 month period) were \$83K.

H. 18 Canal Street, Westerly, Rhode Island – Mercury Spill

On December 9, 1996, approximately half an ounce of mercury was released to the site soils and RIDEM was notified. Remediation contractors conducted various remedial activities at the site to address the release including the shipment of approximately 14 cubic yards of contaminated soil offsite for disposal. In a February 10, 1999 letter, RIDEM requested additional information and a response was submitted to RIDEM on December 22, 1999. The Company then submitted a letter to RIDEM on February 7, 2000 requesting No Further Action with regard to the mercury release. RIDEM has not yet responded. No future costs are anticipated with this project.

J. 9 JT Connell Highway, Newport, Rhode Island

This property is the Company's former Newport operations center. Low levels of environmental contamination were discovered during due diligence investigations related to a sale of the property. The Company no longer owns the property. Groundwater contamination necessitated continued groundwater monitoring and reporting.

All remedial actions are now complete and RIDEM issued a Letter of Compliance to the Company on January 13, 2005 indicating no further action is required. The groundwater monitoring wells were closed in July 2005 and no future costs are anticipated.

K. Thames & Wellington, Newport, Rhode Island

On June 28, 2006, the Company received a Letter of Responsibility from RIDEM requesting a site investigation for this property. A manufactured gas plant operated at this location from the early 1890s until approximately 1955. In the 1980s, the site was developed for mixed residential and commercial use with the construction of condominiums and commercial buildings. The Company has completed site investigation activities under the RIDEM regulations, as well as two significant RIDEM-approved Short-Term Response Actions (storm drain sealing/lining program and soil cap installation). Costs reported this period are for work associated with annual groundwater monitoring and NAPL gauging and recovery; report preparation associated with annual groundwater monitoring and the oxygen-releasing compound (“ORC”) pilot study; coordination with property representatives regarding proposed facility upgrades; environmental support of minor facility upgrades and utility upgrades; annual inspection of the engineered cap; and preparation of monthly status reports to the RIDEM regarding on-going and proposed site activities.

L. Mercury Seal Regulator Replacement Program, Rhode Island

This project is associated with the Company’s current mercury seal regulator (“MSR”) replacement program. This program has a proactive goal to remove all known MSRs from the distribution system. Over 9,000 MSRs have been replaced to date. The work is continuing and includes independent real-time vapor screening of all MSR locations prior to, during, and following MSR removal to document that all mercury was properly contained. Actions taking place during this reporting period include removal of 23 MSRs, two spill cleanups, and removal of impacted vent piping at two additional locations. The average cost per MSR removal during this twelve-month period was \$1,540. The cost of the spill clean-ups was \$40,576 and the cost of the impacted vent piping removal was \$4,475. (approximately \$2,238 per vent).

O. East Providence (First Ave) Holder

The parcel was purchased by the Providence Gas Company in April 1872. The site is the location of two former remote gasholders (referred to as Holders 11 and 20). Available information indicates that gas holder 11 was destroyed during the Hurricane of 1938 and gas holder 20 was present until circa 1972. The property currently houses active natural gas lines and below-grade gas regulator stations. Costs incurred during this period are for work associated with preparation of the Site Investigation Report (“SIR”) which was submitted to RIDEM; preparation of the response to RIDEM comments on the SIR and public notification activities related to the SIR; environmental field support for capping activities related to the rebuilt gas regulator pits; and stockpile management and disposal. RIDEM issued a Remedial Decision Letter for the Site in March 2014 which indicated RIDEM’s approval of the SIR.
